

TRACTOR FRONT LINKAGE & PTO KITS

Goppel Landtechnik manufactures a range of high quality German engineered Front PTO & Linkage kits especially designed to fit tractors after-market. This ensures customers obtain a high quality product for all types of tractors with regard to design and functionality.

Goppel have focussed on just three tractor manufacturers; Landini, Massey Ferguson & McCormick. We build kits for all models, from the smallest to largest, including orchard or agricultural. With their range of PTO & Linkage kits comes an equally impressive range of additional options to suit the relevant tractor model.

The key to a product - which is manufactured 20,000kms away - is the quality, the design, and that it has to be easy to fit, & fit well. This has been the hallmark of Goppel's success.

Goppel Landtechnik export not only within Europe but around the world.
